Risk Assessment

Risk Score: 8/10 Decision: AUTO_STOP

Reasoning:

The construction site has multiple PPE violations, including two instances of workers without vests and one instance of a worker without a helmet, which poses a significant risk of severe injury from head trauma, low visibility, and struck-by hazards. The overall maximum severe injury probability is 34.4%, and the presence of multiple violations increases the risk score. The absence of a helmet, in particular, is a critical violation given the high probability of severe head injury in a construction environment.

Violations Detected (3)

Violation	Confidence	Bounding Box
Without Vest	80%	[0.0, 445.0, 424.1, 674.0]
Without Helmet	58%	[576.8, 86.0, 723.3, 189.6]
Without Vest	49%	[282.7, 287.1, 619.3, 663.0]

Recommended Actions

1. Immediate work stoppage across the entire construction site to ensure no further risk exposure
2. Conduct a mandatory safety stand-down to re-emphasize the importance of PPE and address the violations observed
3. Provide retraining on proper PPE use and ensure all workers are equipped with the correct gear before resuming work
